Vertex[∞] Introduction

Vertex8 is Shanghai-based software consulting firm that delivers **elegant, user-first AI-powered solutions** to complex business challenges.

We aim to **empower clients** through innovative, user-focused software strategies that leverage advanced AI and big data technologies.

To do so, we **deliver End-to-End** solutions, **intervene** at key steps of the Product Cycle, or **mentor** your team.

Our values

We believe in **user-first**: technology is great,
only if it solves an actual problem

We value **integrity**: not upselling or hidden fees

We proceed **carefully**: we study, phase, and roll
out deliverables thoughtfully

Our founder

Cyrille Berliat

柏希睿

Engineer at heart, and coding since my early teens,
I'm passionate about solving real user problems.

12 years @ Google, 15 years across EU, US, Asia.

Building products that matter

Menu Of Services

Part-time CTO/CPO

Pricing: negotiated rate for 1-2 days / week, or as needed.

Product Strategy

Pricing: by the hour/day, fixed mission, or as part-time CPO.

Product development

Pricing: [contact us](#) for a free consultation.

Services

Product Strategy

01

Whether you're stuck with a great idea, or lost with users needs, we deliver clarity.

What you get:

- Clear target users, user stories, and prioritized roadmap
- Risk identification and mitigation strategy
- Actionable next steps (investor deck, PRD, feature prioritization)

Pricing: by the hour/day, fixed mission, or as part-time CPO.

Part-time CPO/CTO

02

Need **strategic direction**, better **product or tech processes**, or help hiring your first tech/PM hires but **can't afford a full time senior**? We got you covered!

What we offer:

- Our founder, [Cyrille](#), brings 12y of Google's building & scaling **experience** to the table at a fraction of the cost
- As part of your team to mentor, implement new processes, land complex situations or unstuck projects

Pricing: negotiated rate for 1-2 days / week, or as needed.

Skills

Hard Skills

- [End-to-End Product management](#)
- Cross-functional team mgt w/o authority (~30pple)
- Data analysis for decision making
- Software architecture & development

Soft Skills

- Leadership & consensus building across teams
- People management (team of 7)
- Active listening / User empathy = UXR
- Effective comm. in French, English, Spanish

Experience

Industries:

- 7 years (B2B) Advertising (DV360, AM)
 - E.g. launch multi-million dollar features at 0 additional support cost
 - E.g. Safely launch ML rev improvements
- 3 years (B2B) CMS/KMS
 - E.g. Rewrite 3 products into 1 and migrate with no interruption of service
- 3 years (B2C) Android & Google Play
 - e.g. launch & scale support in French & Spanish speaking markets (100 million+ users)

Product development

03

Whether you need a process **automated with AI**, or **digitalized as a Website, App**, mini-App, we handle it end to end for a worry-free experience with regular check-ins to avoid risks.

Our process:

- Strategy: needs assessment, solution scope, roadmap
- Agree on quote & planning
- Execution: implementation, delivery, and training

Pricing: [contact us](#) for a free consultation.

Technologies

Our technology philosophy:

- **User-first**: Elegant UIs that solve real problems
 -  KirbyCMS is fast, secure, user-friendly websites with easy content management—no technical expertise required
- **Robust**: Open-source & battle-tested tools, no “buzz-tech”
- **Safety first**: Version control, staging environments, zero-downtime deployments
 -  Github for code, bug tracking & auto-deployment
- **Multi-platform**: Code reuse when possible
 -  EKotlin multi-platform: build once, deploy to iOS, Android, and web—faster time to market, lower costs

Quality assurance

We follow a Quality Assurance Plan (QAP) to ensure the quality of what will be produced throughout the project lifecycle.

Our QAP outlines the rights, duties, and responsibilities (RACI) of the different parties concerning quality monitoring.

We use a separate staging/dev environment where you can follow progress, then safely try out various features without impacting the actual product.

Towards the end of development, we:

- Internally test & debug
- Review with you, allow you to test & file bugs
- Iron out all quirks before go-live
- Phase out the go-live if needed to reduce risks

Contact us

We'd love to hear about your issues

Appendices

Successful AI transformation depends on:

AI Transformation

Packages

Limited budget

Generic Training

You get

- Overview & fundamental understanding of GenAI
- Overview tools with AI for a given field
- Techniques to maximize use of “chatGPT”s
- Ideas on how AI may help your organization

You miss on

- Strategic analysis of your business
- Design & implementation of an End-to-End solution that actually meets your goals
- Potentially successful transformation

Step-by-step budget

Splits **budget** and risks

Makes step-by-step “vertical” implementations

AI Training

Usually not recommended as standalone, better tailored to your needs post assessment

GenAI Fundamentals

- History & definition
- Core concepts
- Opportunities & Risks of GenAI
- Prompt Engineering (one/multi shots, reverse prompting, CoT, etc.) with exercises
- Q&A

+

Applied GenAI

- Overview of existing tools for a given scope
- Brainstorming based on your processes
- Example of processes to automate:
 - (Pre)-Sales:
 - Standardize CRM Profiles from any interactions
 - Auto-outreach for localized cold calls
 - Qualify leads & handle pre-sales questions
 - Production follow-up/Support

E2E Product Life-cycle

Product Strategy - “The what”

Problem definition

Review/Create Qualitative

- UX Research “UXR”
- Interview stakeholders & subject matter experts “SME” (sales, support, etc.)

Review Quantitative data

- Market data/audits
- Data analysis of usage

“What to tackle” definition

- Metrics of success
- User Personas & Stories
- Critical User Journeys CUJ
- Prioritization & impact

Stakeholders alignment

What to tackle

- Metrics of success
- CUJs
- Priority

Solution definition

Market analysis

“What to build” definition

Depends on project complexity

- Proposal & Approval
- Brainstorm with SMEs

Mocks validation (iterative)

- Non-functional test
- User Acceptance Tests

Stakeholders alignment

What to build

(often combined with the “How” review)

Product Strategy - Compelling user stories

Internal Sources

Stakeholders

Qualitative

Log analysis

Quantitative

Sales Rep.

Qualitative

Support Rep.

Qualitative

Support Tickets

Quantitative

External Sources

User Interviews

Qualitative

User Surveys

Quantitative

Competitors

Qualitative

UX Research

Qualitative

PM as User Expert

- With own opinion
- With data/facts to backup
- Not sticking to the what users do, but the why they do it?
- Proper root causes analysis can lead to similar or disruptive solution

But also understanding company constraints: business, tech, political

Personas profiling

Ad Trafficker

Sales

Regional Mgr

User stories & CUJs

Regional Mgrs have P&L responsibility for their regional inventory and compete against historical & other regions' performances.

[P0] CUJ1 RM. reports on previous performance

[P1] CUJ1 RM. needs to forecast inventory based on historical data

Product Strategy - “The How”

End-2-End Product cycle vs. Cost of mistake

Product & organizational mentoring

Product managers (PMs) often evolve in complex stakeholder or product situation with little guidance. This leads to common pitfalls:

Pitfall	Consequence	Mentoring
Unclear delineation of different job roles (PM, PO, PgM...)	Product manager not spending time on right tasks, team inefficiencies	Organizational mentoring on how to clarify the RACI matrix
Stakeholders aren't aligned, or have diverging opinions	Good solutions aren't approved and project stalls	How to backchannel, build compelling arguments tailored to audience
Involving experts (legal, privacy, eng, etc.) too late	Infeasible solution, disconnected from users or rejected by stakeholders	Guidance on who and when to engage
PM doesn't delegate enough	PM becomes the bottleneck and project stalls, or quality drops	Time management mentoring & RACI
PM talks too little with users/too little UXR	Solution disconnected from users	Process to follow
